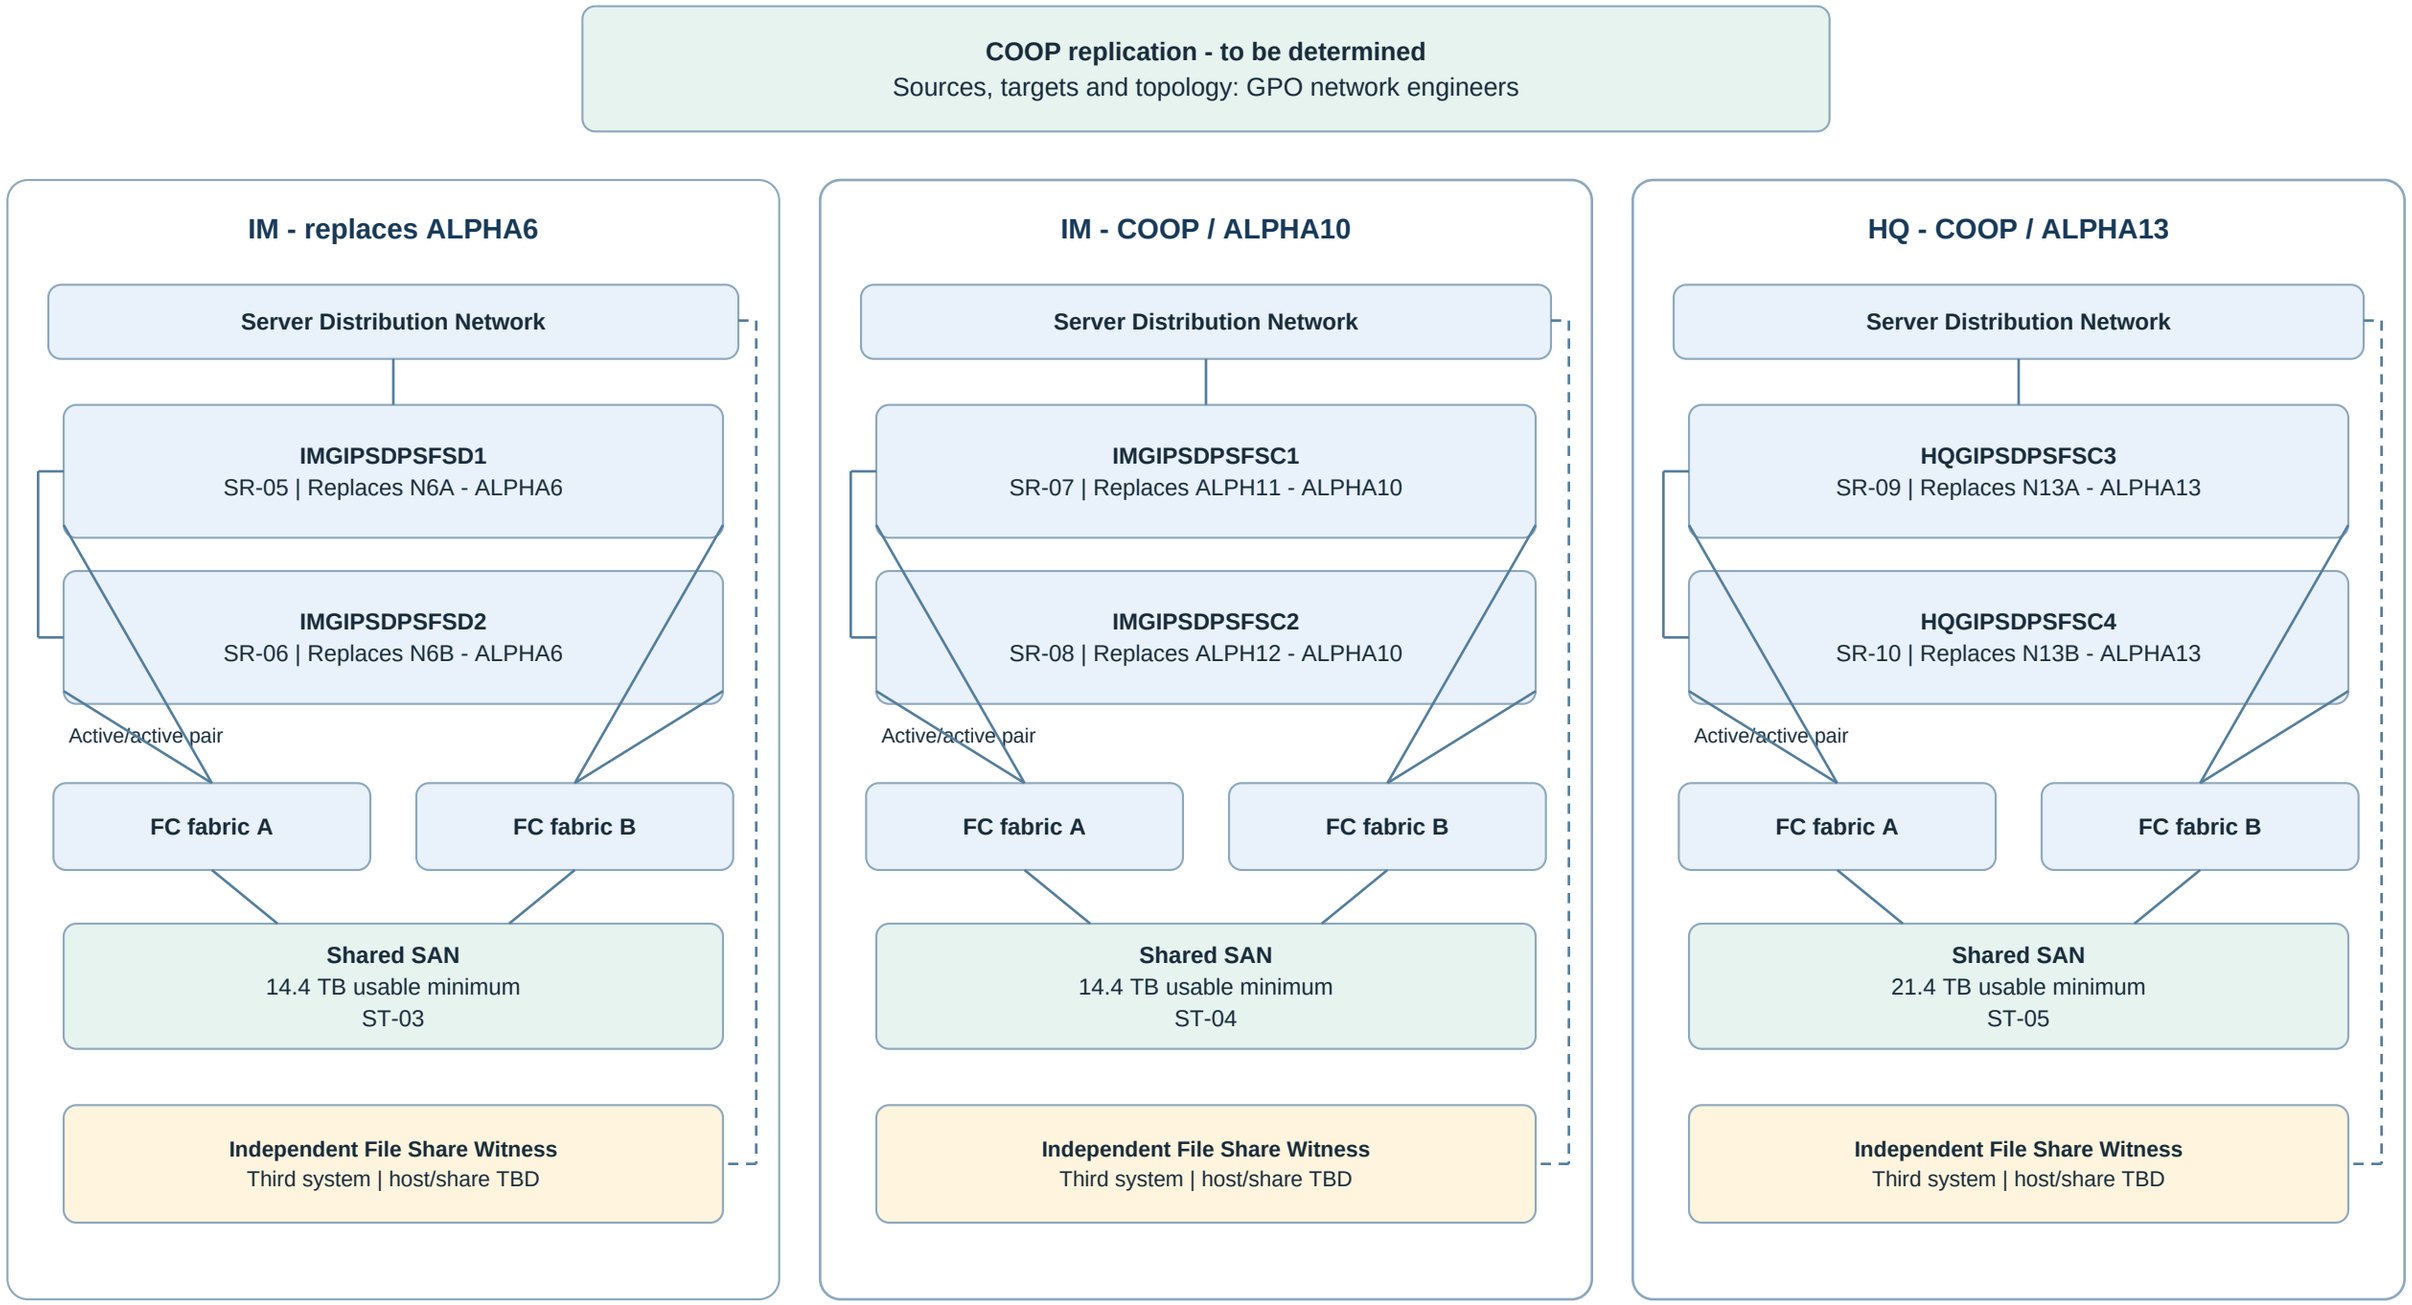
GDPS COOP Network Node Diagram

COOP is the ServiceNow environment for all six recovery nodes. The ALPHA6 replacement pair remains at IM; ALPHA10 replacements are at IM; ALPHA13 replacements are at HQ. Legacy DCIAC labels identify the source systems.



N13A/N13B confirmed. SR-09/10 at HQ; SR-07/08 at IM. COOP replication is assigned to GPO network engineers.

Logical connectivity. Solid lines: network/storage paths. Dashed lines: cluster pairing or witness access. Dual independent FC fabrics with Windows MPIO; redundant Server Distribution connectivity.

Witness shares are independent of cluster nodes and clustered storage. HBA models, speeds, compatibility and assigned network values require infrastructure-team confirmation.
