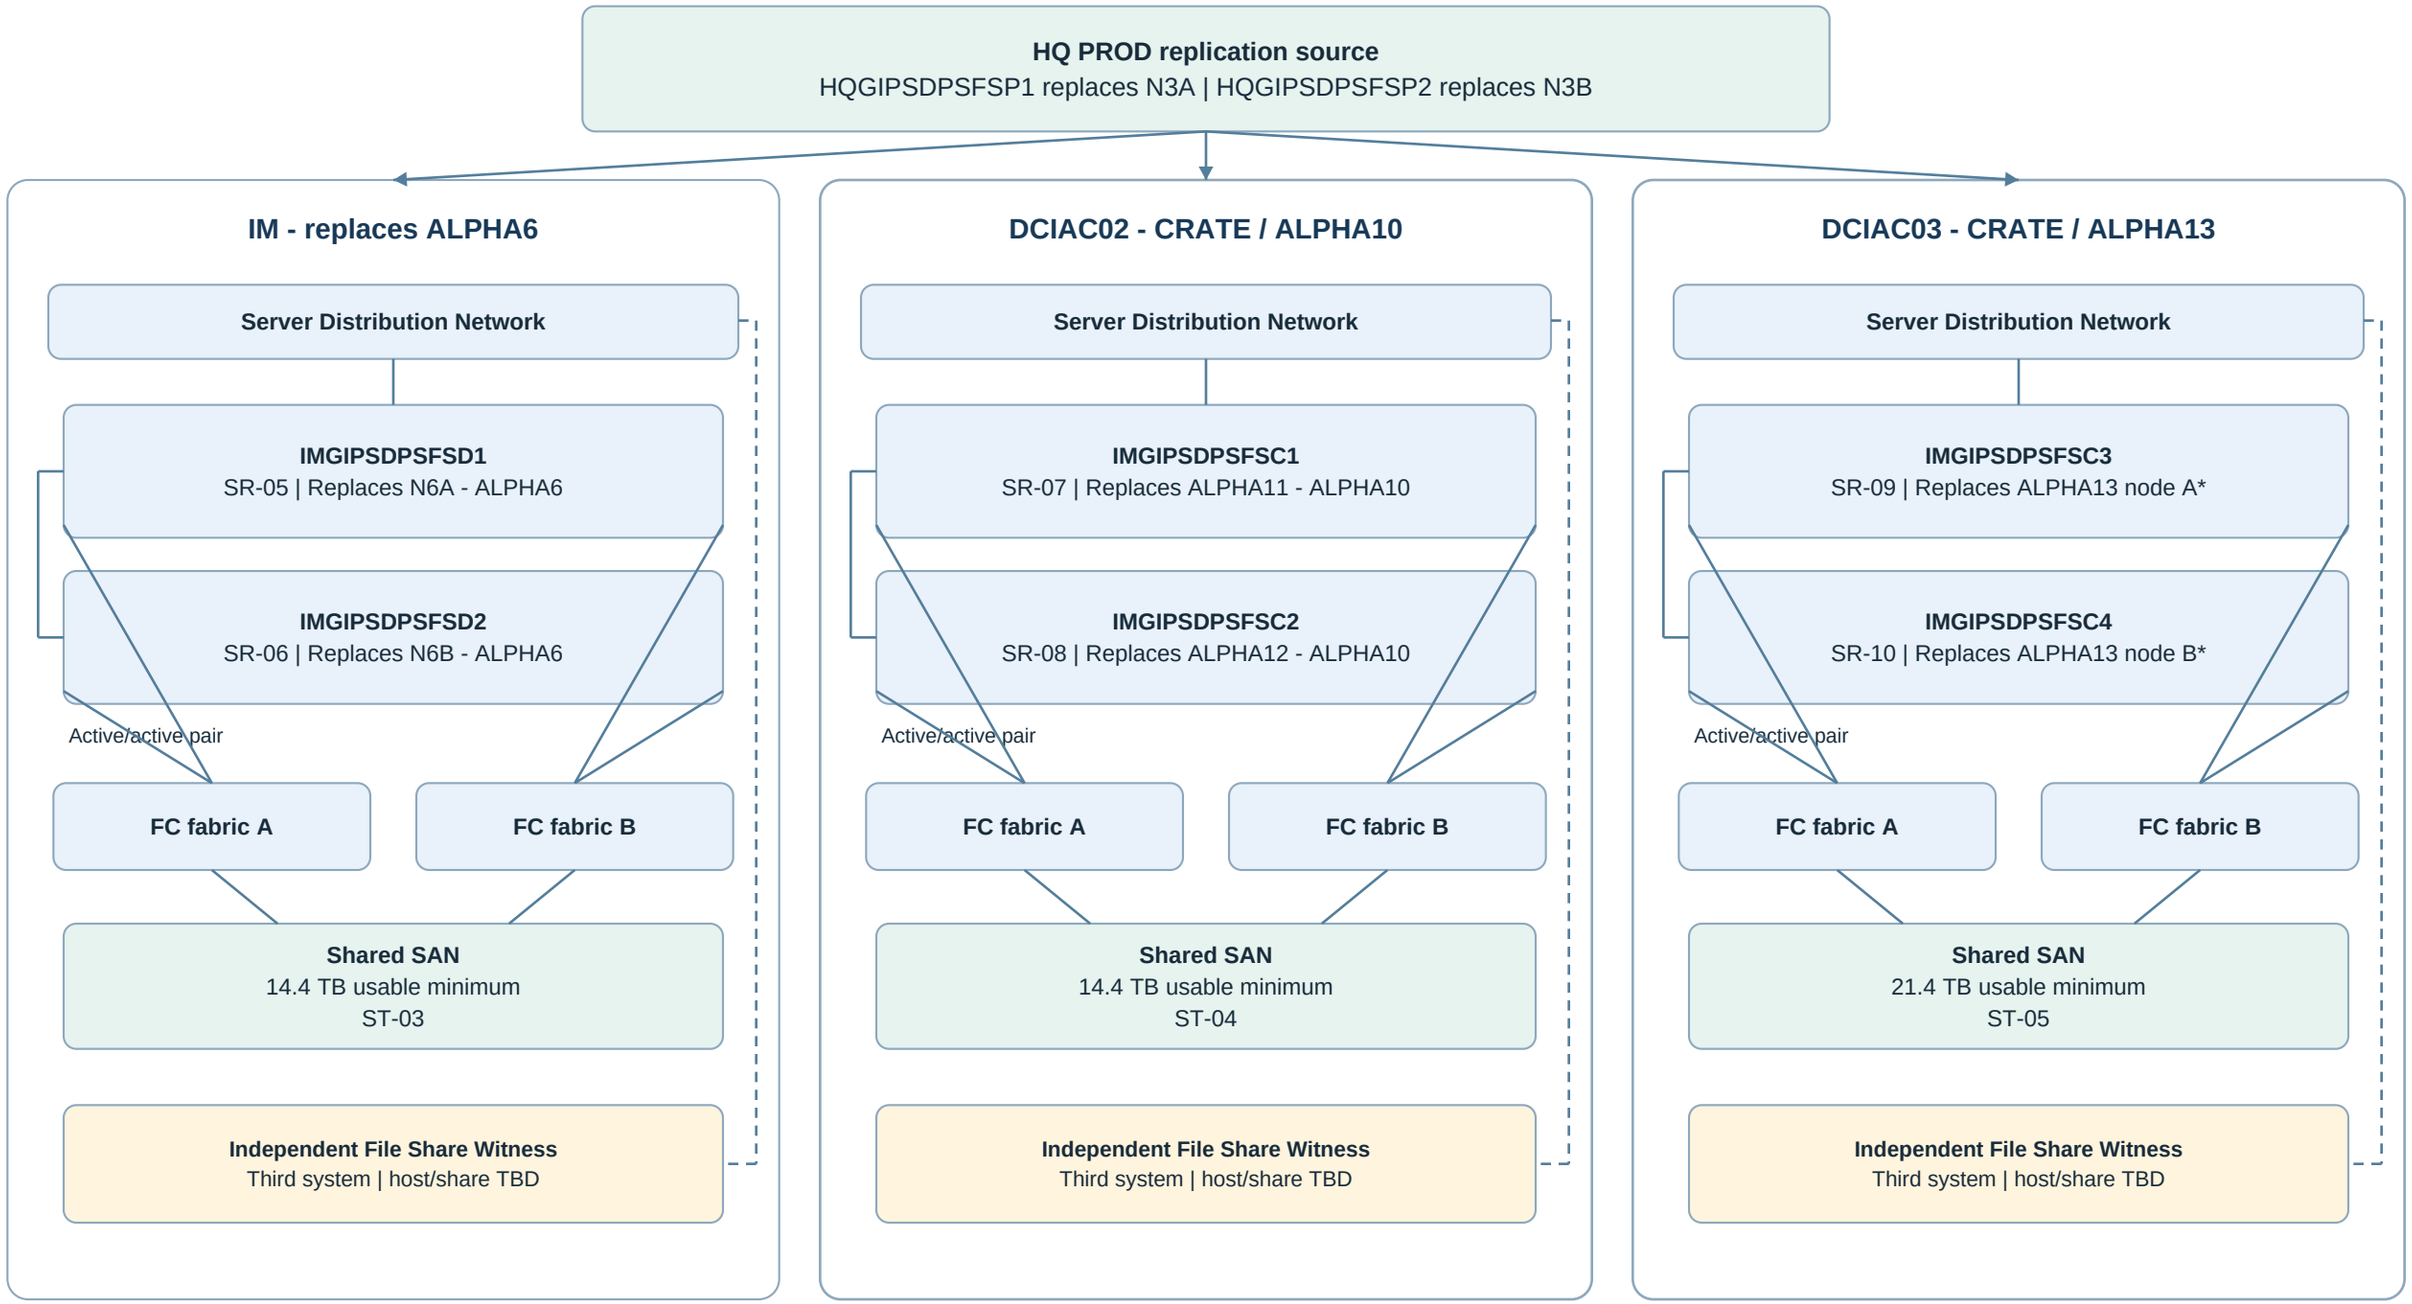
# GDPS COOP Network Node Diagram

COOP is the ServiceNow environment for all six recovery nodes. The ALPHA6 replacement pair remains at IM; ALPHA10 and ALPHA13 replacements remain in DCIAC02 and DCIAC03 in the Data Center in a Crate (CRATE).



Arrows: logical recovery replication from HQ PROD. *ALPHA13 node names N13A/N13B remain unconfirmed; confirm with SHOW CLUSTER.

Logical connectivity. Solid lines: network/storage paths. Dashed lines: cluster pairing or witness access. Dual independent FC fabrics with Windows MPIO; redundant Server Distribution connectivity.

Witness shares are independent of cluster nodes and clustered storage. HBA models, speeds, compatibility and assigned network values require infrastructure-team confirmation.
